Dear Committee Members,

I am writing to endorse the Research Commercialisation Proposal Application for the funding consideration of an innovative project focused on the development and commercialization of reusable menstrual pads. This project is designed to provide an environmentally friendly and cost-effective solution for menstrual hygiene management, particularly for women and girls in underserved communities.

The research has demonstrated the potential for reusable menstrual pads to significantly reduce period poverty and menstrual product waste, improve access to affordable hygiene options, and address the growing need for sustainable alternatives in the hygiene sector. By leveraging NASENI's support, the project aims to scale up production and distribution, ensuring that these pads reach the communities that will benefit most from them.

I believe this project aligns with NASENI's mission to promote innovation and sustainable development, and I am confident that, with your assistance, it will create positive socio-economic impacts, particularly in the areas of health, education, and environmental sustainability.

Sincerely,

Dr. Adamu Dalhatu

Associate Professor
